

The phone only rings when you asked it to.

연락 means "to get in touch."

Yeonrak is the opt-in call exchange: verify once, say when and why, and only ever take the calls you asked for.

 Consent is given per purpose, not per institution. Agreeing to a fraud alert is not agreeing to a sales call.

 Free for people, used by the institutions that must reach them.

Korea has learned to fear its own phone: phishing losses tripled in two years and voice spam doubled in six months.

UNWANTED

Voice spam per person doubled in six months

UNSAFE

Scammers impersonate the institutions people trust

UNANSWERED

Institutions cannot reach the people they are required to reach

The person who stops answering also misses
Both sides of the line lose.

- the fraud alert
- the hospital result
- the insurance renewal

Sources: National Police Agency via Korea Herald and Seoul Economic Daily; KCC and KISA spam report H2 2025; GASA State of Scams in South Korea 2025; Korea Times, August 2026.

We are in the business of trust on the phone line, not callback software and not spam blocking.

PASS proves who you are. Yeonrak proves what you agreed to, for what purpose, and when.

WHO GETS WHAT

People

Calls they asked for, at the time they chose

Institutions

A lane where the phone is answered

Call-center workers

Conversations instead of rejection

NOT OUR BUSINESS

- × Callback software
- × Spam blocking
- × Another app to download

WHO PAYS

Free for people, used by the institutions that must reach them.

The obvious rivals block calls; the unexpected best competitor owns identity, and the real enemy is the ignored call.

WHAT THEY DO BETTER TODAY

Traditional blockers

Installed on tens of millions of phones and already inside the bank apps.

Telcos and Kakao

Hold verified identity for the whole country and sit on the network. SK Telecom alone blocked 250 million calls in 2025.

The ignored call

Free, instant, needs no app. People already solved the problem by not answering.

The bank's own callback button

Already built, already trusted, no third party needed. It only works inside one bank, so the phone still rings from everyone else.

What none of them does: nobody makes a call wanted before it rings.

Every call from an institution is real,
and it comes **when you asked for it.**

	WHY	Nobody should fear their own phone.
	HOW	Verify once, opt in, call by appointment.
	WHAT	A consent layer institutions build into their apps, and one place where people see every call they agreed to.

We play to win, not to compete: the standard lane for institutional calls in Korea, not one more blocking app.

The aspiration passes all six tests that Playing to Win sets for a winning aspiration, and it is only the first of the five choices.

✓ TEST 1

Plays to win rather than to compete

A standard lane, not a feature

✓ TEST 2

Meaningful to employees and customers

Call-center staff reach only people who asked;
people get their phone back

✓ TEST 3

Starts with consumers, not products

Fear of the phone, not a callback feature

✓ TEST 4

Set for internal functions too

What winning means for the verification team,
the institution team, the person-facing app

✓ TEST 5

Thinks about winning relative to competition

Telcos, Kakao, the ignored call

⊙ TEST 6

Don't stop here

The aspiration is the first box; the next four come
in the coming weeks

Winning aspiration

Where to play

How to win

Capabilities

Management systems

Winning looks like a phone people pick up again: verified calls get answered and impersonation stops working.

THREE MARKERS OF WINNING

Unknown-number calls from institutions are answered because they carry a verified purpose.

Impersonation of banks and public agencies stops working because the real ones call through a lane scammers cannot enter.

A call-center shift is a list of conversations people requested.

THE YEONRAK PRECEPTS

Identity is verified once and never sold.

The person chooses the time.

Every call leaves a record both sides can read.

We earn only when a wanted call happens.

9 in 10

verified calls answered

against a far lower answer rate for unknown numbers today. The gap is the proof that trust came back.

Make answering the phone **feel safe again.**

Get in touch. This time, we asked for it.
